

TUBING ACCESSORIES

TUBE BENDERS

- High quality bending performance on stainless steel, and other hard tubing such as steel and titanium.
- Two stage design allows for in-place bending from 90° to 180° without ever crossing handles. Lock/unlock with a half turn rotation of the bending handle.
- Extra-long 16" (40 cm) handles increase leverage and roll dies in the bending form reduce force needed.
- Vice clamp built into bending form for extra stability

TUBE CLAMPS

- Suitable for general hydraulic applications.
- The function of tube clamps is the fixing of straight tubes, bent tubes and hoses, the broad product range of Parker tube clamps helps to find a solution for all requests and therefore extends the range of applications.
- Their notable features are re-set capability, high tensile strength, very high abrasion resistance and excellent resistance to cold.
- This range of features enlarges the number of possible applications and stretches the life-cycle of tube clamps.

TUBE CUTTERS

- Adjustable tube cutters are designed to produce square cut ends with no external burr and minimum internal burr when used on fully annealed copper, brass, aluminium and steel tube.
- Features a hardened and burnished tool-steel cutting wheel and a flare cut-off groove in roller.
- The handle feeds and adjusts the cutting wheel to uniformly cut tube as the cutter is rotated.
